

Press Release

Green acquires data centre in Zurich

The green.ch Group is taking over the Zurich Versicherung high-security data centre, thereby further extending its portfolio of data centre space.

Brugg, 27th May 2016. – Green, the leading Swiss data centre provider, is taking over a high-security data centre with a floor space of 3,200 m² on the outskirts of Zurich from Zürich Versicherungs-Gesellschaft AG (Zurich). Various companies from the financial sector will continue to use the data centre and will become customers of Green. The purchased property boasts 1,600 m² of available data centre space.

The mainly underground data centre on the outskirts of Zurich is the ideal addition to the Green data centre portfolio. Distances to Green's data centre locations in Lupfig and Glattbrugg are ideal for offering companies geo-redundant solutions for storing their data.

The facilities and the security-related equipment have been continually maintained and updated by Zurich. All the regulatory requirements applicable to the financial sector are complied with. The purchased building comprises four underground levels with data centre and technical spaces, plus IT and emergency workstations on the ground floor and upper floor.

The two parties have agreed to keep the purchase price confidential. The data centre will now be integrated into the Green network and into its data centre operation and will also be available to new customers from June 2016.

With the additional location, Green is further enhancing its data centre portfolio. "With this purchase, we are strengthening our position as the leading data centre provider in Switzerland," said Franz Grüter, Chairman of the Board of the green.ch Group, explaining the reasoning behind the acquisition.

About the green.ch Group

The green.ch Group comprises the two companies green.ch and Green Datacenter AG. green.ch provides private and business customers with high-quality internet connections, hosted, cloud and multimedia services and data backup solutions. Green Datacenter AG provides data centre services for medium-sized and large companies in Switzerland, Europe and throughout the world. In Lupfig, in the canton of Aargau, the concern operates greenDatacenter Zurich West, which is the first data centre in Switzerland to be constructed in accordance with the TIER IV standard. The company offers colocation services and also leases out data centre space, including emergency workstations. In total, the company looks after the needs of approximately 100,000 customers. green.ch AG and Green Datacenter AG are part of the Altice Group.
